Hi Sean and Davis,

We just finished the composite grab sample SG-B436 at river mile 13 on the west side of the river. This sample was a two-point composite due to seven attempts being performed with only two sediment grabs being collected at this location. Please see the attached photos for details:

Photo 1: Buried utilities near the marked location. We had to stay a minimum of 25 ft from the utility line location.

Photo 2: Sediment sample from attempt 2.

Photo 3: Sediment sample from attempt 6.

Photo 4: Retro bicycle from attempt 4.

Please let me know if you have any questions.

Sincerely,

Joe Guggenberger, PhD, PE

Environmental Engineer

CDM Smith
